DETAILED ACTION

Election/Restrictions

1. Claim 15 allowable. The restriction requirement between species, as set forth in the Office action mailed on February 14, 2007, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claim 18, directed to species no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. Claims 1-3 and 12-23 allowed over prior art of record.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

After further search and consideration of Applicant's arguments, it is determined that the prior art of record neither anticipates nor renders obvious the claimed subject matter of the

instant application as a whole either taken alone or in combination, in particular, prior art of record does not teach “the substrate layer is maintained at a potential sufficiently lower than a potential of the source, to form a parasitic MOS channel between the source and drain; and a Deep N implant layer configured and arranged formed to prevent flow of current between the source and drain via the parasitic MOS channel when the device is in an off state,” as recited in claim 1, “a deep implant layer adjacent to at least one of the source and the drain; and an SOI layer between the substrate layer and the deep implant layer, when the substrate layer is maintained at a potential sufficiently different than a potential of the source, the substrate layer forms a parasitic MOS channel is between the source and drain, and wherein the deep implant layer prevents flow of current between the source and drain via the parasitic MOS channel when the device is in an off state,” as recited in claim 15, “a deep implant region extending below and laterally adjacent at least one of the source and drain, and configured and arranged to prevent current flow between a parasitic MOS channel in the substrate and the at least one of the source and drain when the device is in an off state, and a channel region above the deep implant region and between the source and drain,” as recited in claim 22 respectively.

Claims 2, 3, 12-14, 16-21 and 23 are allowed as being dependent of the allowed independent base claim.

Conclusion

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
